

**SATURDAY MAY 19th, 8:30AM – 4:30 PM**  
**COLUMBUS AIR FORCE BASE - COLUMBUS, MS**

According to a study by The Governor's Highway Safety Association the number of 16 and 17 year-old drivers who died in car accidents increased by 11 percent in the first half of 2011 compared with the same period of 2010. This increase breaks a 8 year decline in teen driving deaths. While high school driver's education does a good job teaching the rules of the road, they do not address how to make accident avoidance or skid recovery maneuvers. All too often the first time a teen driver makes a accident avoidance maneuver it is in a crisis situation.

The primary emphasis of the Tire Rack Street Survival® is a "hands-on" driving experience in real-world situations! We use your own car to teach you about its handling limits and how you can control them. The students will become more observant of the traffic situation they find themselves in. They will learn to look far enough ahead to anticipate unwise actions of other drivers. As the students master the application of physics to drive their cars, they will make fewer unwise driving actions themselves. They will understand why they should always wear their own seat belts, and why they should insist that their passengers wear seat belts, too.

This program also qualifies for insurance premium discounts for many auto insurance companies.

Come join us for a fun and informative day with your child who just may learn something that could save their life.

It's about more than driving - it's about LIVING!

Cost of the program is \$75 and it is open to licensed or permitted drivers ages 15-21.

Space is limited to the first 30 paid and registered students. Parents are welcome to attend and participate.
